How to Use This Catalog

This catalog contains applications and part listings for front and rear axles which fit Jeep vehicles from model years **1999** and newer. For information on model years between **1967-1978**, please refer to catalog X510-8DSD; Jeep model years **1979-1999** refer to X510-9. For miscellaneous models from years **1979-1984**, please refer to X510-7DSD.

The data in this publication is arranged by make, then in numerical order by model for front axles and then for rear axles. Each model contains the following three sections as appropriate:

- Parts Listing and Exploded View**

This section contains an exploded view of the axle and lists all the part numbers for those parts illustrated. The parts that do not have a common part number have a footnote reference indicating where to find the correct part number for each Bill of Material.

Note: Additional information on Spicer axles can be found in our General Information catalog number XGI. It contains the following sections:

- Bill of Material Numerical Listing
- Ring and Pinion Kits
- Differential Case Assembly Kits
- Axle Shaft Dimension and Components

General Information

How To Identify A Spicer Axle

All Spicer Carrier Type axles are identified with a manufacturing date (1) and Bill of Material number (2) stamped on the right or left hand tube on driving axles. The Bill of Material number may also be found on the carrier in some models as shown in illustration (2A). For independent front suspension (IFS) axles, the B/M number may be located at one of three locations: 1). A vertically positioned tag near the center of the right hand side support arm, 2) stamped into the left hand side support arm (opposite end of the camber adjuster), or 3) stamped into the "nose end" of the axle carrier. The location of the information will depend on the manufacturing date of the axle.

The axle model number will be cast into one of the webs as shown (3), or it can be on the nose.

Each axle contains a gear ratio tag (4), and if the axle is equipped with a limited slip differential, it will have a tag specifying the type of limited slip lubricant to be used (5).

Refer to the appropriate model number section for parts identification and a breakdown of the Bill of Material.

How To Change Gear Ratios

To increase or decrease a gear ratio, there are certain steps that must be taken. The differential case depends upon the ratio desired. For each axle model, there is a high-ratio and a low-ratio case as illustrated below:

Axle Model	Low Ratio Case	High Ratio Case	Axle Model	Low Ratio Case
High Ratio Case				
Model 27	3.73 and Down	3.92 and Up	Model 50	4.10 and Down
Model 28	3.45 and Down	3.73 and Up	Model 60	4.10 and Down
Model 28 IFS Aerostar	2.27, 3.73	—	Model 61	—
Model 30	3.55 and Down	3.73 and Up	Semi Float	3.00 and 3.07 only
Model 35	2.35 only	—	Model 61	—
Model 35	2.73 - 3.31	3.54 and Up	Full Float	3.31 and Down
Model 36 ICA	2.73 and Down	3.07 and Up	Model 70	4.10 and Down
Model 44	3.73 and Down	3.92 and Up	Model 70-3HD	3.42 and Down
Model 44 ICA	—	—	Model 70-2UA	3.07 only
1984 & earlier	3.73 and Down	3.92 and Up	Model 80	3.73 and Down
Model 44 ICA	—	—		
1985 & later	2.87 and Down	3.07 and Up		

Example - If you have a model 44 Rear Axle with a 3.54 ratio and wish to change to a 3.73 ratio, you change only the ring gear and pinion assembly. If you change the ratio to a 4.09, you must change to a high-ratio case in addition to changing the ring gear and pinion. The application section will show you what case to use. When the vehicle is equipped with both front and rear driving axles, the gear ratios must be the same in both axles. **The drive gear screws are self-locking and must be replaced with new screws each time that they are removed.**

How Limited Slip Differentials Operate

A conventional differential transmits all the ring gear torque through the differential gears to the axle shafts. Torque is at all times equal on the axle shafts, and if one wheel slips, the other wheel can only put out as much torque as the slipping wheel.

The Spicer Limited Slip differential has the same power flow as a conventional differential, plus a more direct flow which automatically takes effect as driving conditions demand. This more direct power flow is from the differential case to each axle shaft through a clutch plate and disc arrangement.

Arrangement of these plates and discs is at the option of the vehicle manufacturer, so care should be taken during disassembly to note the arrangement of these components.

The Limited Slip construction permits differential action when required for turning corners and transmits equal torque to both wheels when driving straight ahead. However, when one wheel tries to spin due to leaving the ground, a patch of ice, etc., the clutch packs automatically provide more torque to the wheel which is not trying to spin.

The Limited Slip differential resists wheel spin on bumpy roads and provides more pulling power when one wheel tries to slip. In many cases of differences in traction, pulling power will be automatically provided until both wheels start to slip.

In diagnosis of vehicle operators' complaints, it is important to recognize two things.

1. If, with unequal traction, both wheels slip, the Limited Slip Differential has done all it can possibly do.
2. In extreme cases of differences in traction, the wheel with the least traction may spin after the Limited Slip has transferred as much torque as possible to the non-slipping wheel.

How To Obtain Special Service Tools

Special service tools (see service manuals) can be obtained from the following company:

Kent-Moore
OE Tool and Equipment Group
SPX Corporation
28635 Mound Road
Warren MI 48092-3499
(800) 345-2233

(7) See Ring Gear & Pinion Kits in XGI Catalog for ratio & tooth combinations.

(8) See Differential Case Assy Kits in XGI Catalog for spline data & ratios.

(9) Serviced with complete differential case assembly kit only.

* Some 2007 JK Wrangler rear axles were produced with components using 7/16"-20 ring gear screws. When servicing one of these axles, the differential case assembly, ring gear and pinion assembly and ring gear screws must be replaced with their 1/2"-20 equivalents. The part numbers listed in the bill of material table are correct for the 1/2"-20 components.

Jeep Super 44 /226 Rear (JK) Bill of Material Table

[illegible]

(7) See Ring Gear & Pinion Kits in XGI Catalog for ratio & tooth combinations.

(8) See Differential Case Assy Kits in XGI Catalog for spline data & ratios.

(9) Serviced with complete differential case assembly kit only.
